1. Split this string

```
s = "Hi there Sam!"
```

```
s = "Hi there Sam!"
g=s.split()
g
```

```
['Hi', 'there', 'Sam!']
```

2. Use .format() to print the following string.

Output should be: The diameter of Earth is 12742 kilometers.

```
planet = "Earth"
diameter = 12742
```

Basic Python

```
planet="Earth"
diameter= 12742
"The diamter of the {} is {} kilometers.".format(planet,diameter)
```

```
'The diamter of the Earth is 12742 kilometers.'
```

3. In this nest dictionary grab the word "hello"

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
```

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
d['k1'][3]['tricky'][3]['target'][3]
```

```
'hello'
```

Numpy

```
import numpy as np
```

4.1 Create an array of 10 zeros?

4.2 Create an array of 10 fives?

```
import numpy as np
np.zeros(10)
([0.,0.,0.,0.,0.,0.,0.,0.,0.,0.])
```

```
     [0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0, 0.0]
```

```
np.ones(10)*5
([5.,5.,5.,5.,5.,5.,5.,5.,5.,5.])
```

```
     [5.0, 5.0, 5.0, 5.0, 5.0, 5.0, 5.0, 5.0, 5.0, 5.0]
```

5. Create an array of all the even integers from 20 to 35

```
import numpy as np
array=np.arange(20,35,2)
print("Array of all the even integers from 30 to 70")
array
```

```
     Array of all the even integers from 30 to 70
     array([20, 22, 24, 26, 28, 30, 32, 34])
```

6. Create a 3x3 matrix with values ranging from 0 to 8

```
import numpy as np
np.arange(0,9).reshape(3,3)
```

```
     array([[0, 1, 2],
            [3, 4, 5],
            [6, 7, 8]])
```

7. Concatenate a and b

a = np.array([1, 2, 3]), b = np.array([4, 5, 6])

```
import numpy as np
a=np.array([1,2,3])
b=np.array([4,5,6])
array=np.concatenate((a,b),axis=0)
array
```

```
array([1, 2, 3, 4, 5, 6])
```

Pandas

8. Create a dataframe with 3 rows and 2 columns

```
import pandas as pd
```

```
import pandas as pd
A=['a','b','c']
DataFrame=pd.DataFrame(A,columns=['alphabets'])
DataFrame
```

	alphabets
0	a
1	b
2	c

9. Generate the series of dates from 1st Jan, 2023 to 10th Feb, 2023

```
import pandas as pd
from dateutil.parser import parse
date_series=pd.Series(['Jan 2015','Mar 2017','Apr 2018','May 2019'])
print("original series:")
print(date_series)
print("\nNew dates:")
result=date_series.map(lambda d: parse('11'+d))
print(result)
```

```
original series:
0    Jan 2015
1    Mar 2017
```

```
2    Apr 2018
3    May 2019
dtype: object

New dates:
0   2015-01-11
1   2017-03-11
2   2018-04-11
3   2019-05-11
dtype: datetime64[ns]
```

10. Create 2D list to DataFrame

lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]

```
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
```

```
import pandas as pd
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
d_list=pd.DataFrame(lists,columns=['A','B','C'])
d_list
```

	A	B	C
0	1	aaa	22
1	2	bbb	25
2	3	ccc	24
